Feet Reflect Your Body Mind & Soul

MARCH
23 & 24

www.reflexologytraining.co.nz

What is Reflexology?

Reflexology is a safe, effective, natural touch therapy that activates the body's own innate healing system.

On the feet, there are 'reflex' points, that are a 'reflection' of all organs, glands and body systems. The feet represent a mirror of the body and all parts of the body can be worked on via the feet.

Reflexology is the application of specialised combinations of thumb, finger and hand pressure techniques. Activating specific 'reflexes' creates an 'energetic shift' on a physiological and psychological level.

Thousands of nerve endings on the feet are touched on during a session, helping to improve energy flow via the sensory nervous system, thus allowing better communication between body and brain.

Reflexology improves circulatory and nerve supply function, so all body systems benefit greatly. Immunity and detoxification improves, hormones are balanced, stress and sleep patterns improve, emotions calmed and overall vital health is enhanced.

Reflexology can be a 'healing experience' in which the body/mind benefits.

Reflexology is a complementary therapy that is gentle, non-invasive and treats the person holistically. Everyone has the potential to benefit, from babies to the elderly.

Be part of the worldwide trend and learn this exceptional profound healing system.
